

# Capturs IoT SAAS ONLINE SOFTWARE

(((CAPTURS®

# The Capturs platform

- The Capturs platform

Captus IoT SAAS is the online software suite of Capturs. It allows the use of Capturs GPS trackers and Capturs Android / iOS mobile application in a powerful and versatile online software. Capturs SAAS is available on all platforms, web and mobile and allows the integration of hardware from other OEMs. The interface is customizable and available in white label.

Capturs IoT SaaS uses the smart data sent by the sensors on the cloud to generate analysis and reports generating a ROI on specific activities. The relevance of the analysis and the perfect adaptation of the assessed data to the business allows a faster and consequent

## Compatible GPS trackers

**Model B**

**Model C**

**Model C Beehive**

**Endurance  
GSM**

**Performance  
GSM**

**Mini GSM**

**OBD GSM**

**Power GSM**

# Profile and Login management

- Profile and Login management

## Login methods

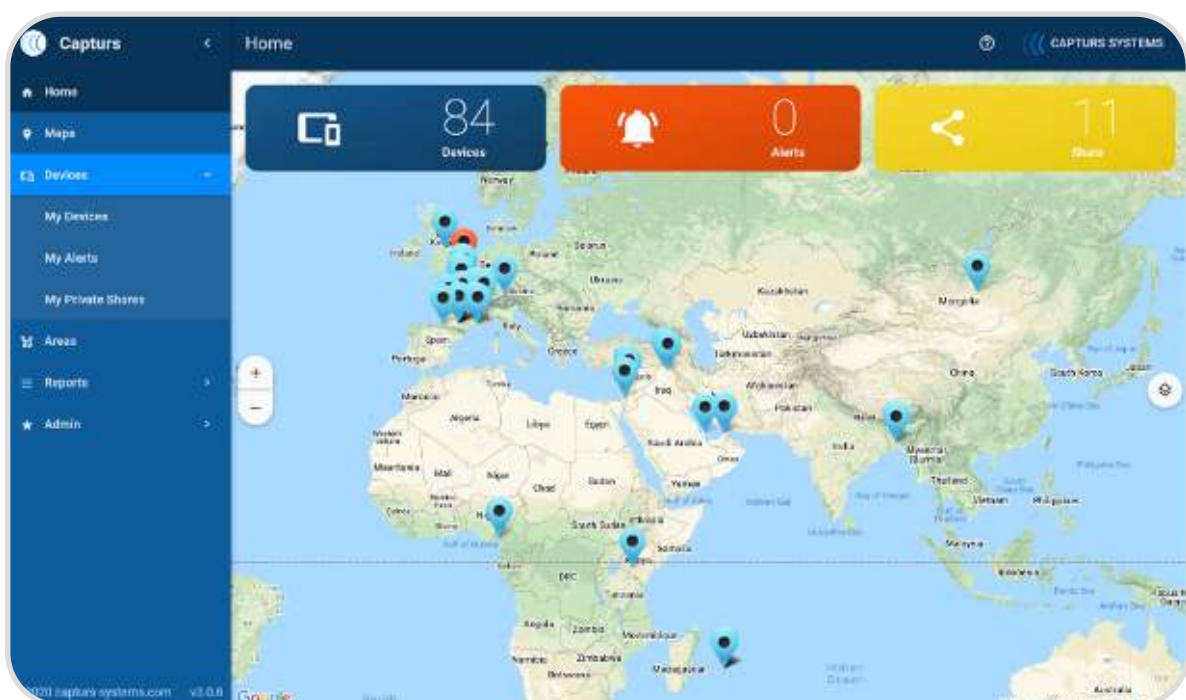

Secure authentication:  
Capturs does not have access to key.

- Email (secured)
- Google (secured)
- Apple (secured)

## Languages

- English
- French
- Spanish
- Italian
- Swedish
- Russian
- Arabic
- German
- + Any requested language

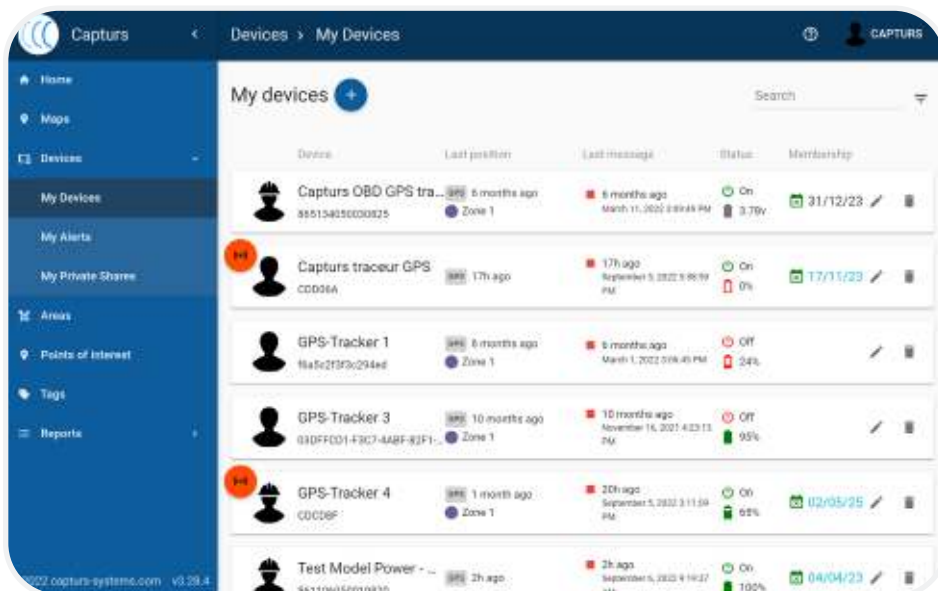

## Dashboard: locate all your devices in one click

# Device management

- Device management

## Your devices

- Manage as many devices as you need on the platform.
- Add, delete, search devices in one click.
- Easily integrate different type of devices (IoT, Sigfox, LoRa, Smartphones, NB IoT, LTE-M) with API.

### Add new device

Serial Number (S/N) \*

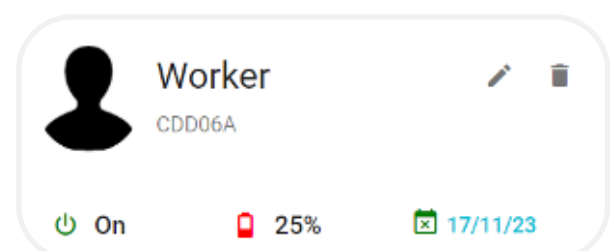

Key \*

CONFIRM

CANCEL

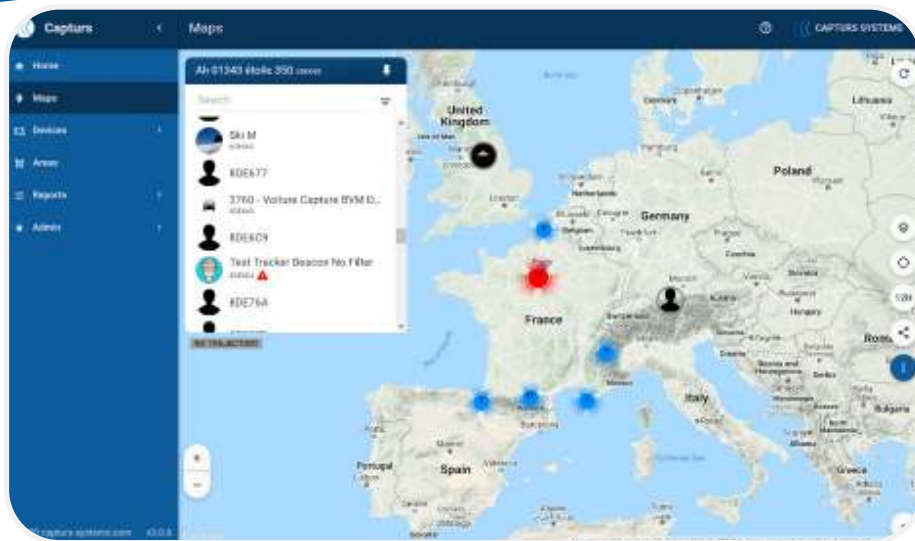

## Characteristics

- Customize device name and picture.
- Real time status (ON / OFF).
- Real time battery level.
- Membership validity date : renew plan in one click.
- Link your device with other third parties services and get status on the platform.

# Map display

- Map display

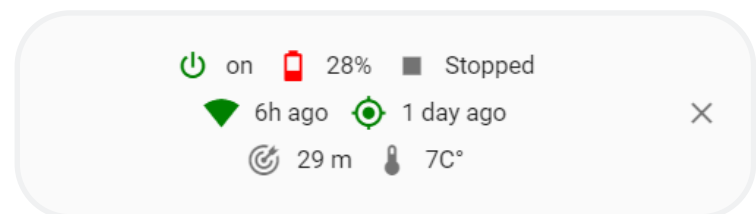

## Devices

- Display all your devices on a Map.
- Google Maps or Openstreetmap (Mapbox).
- Choose narrow or wide view, standard map or satellite.
- Search device by name or ID.

## Informations

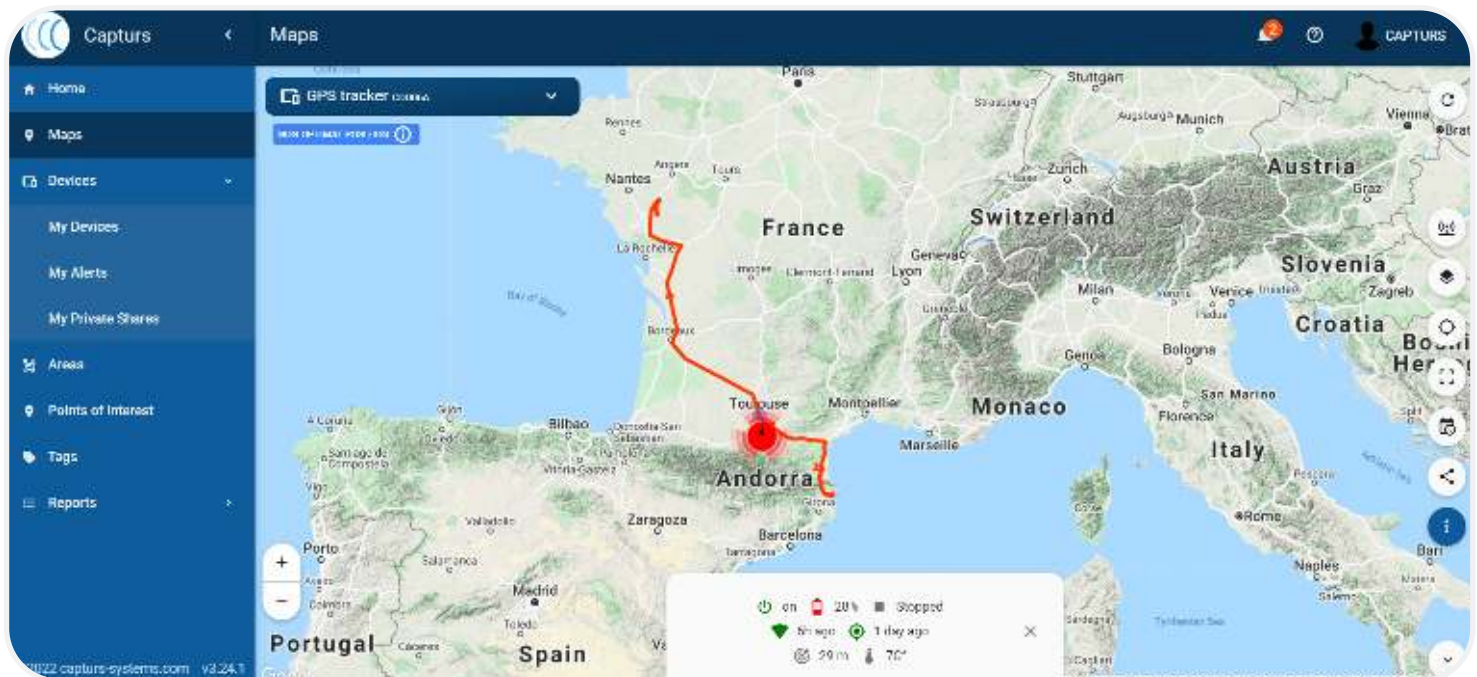

- Banner displaying real time tracking info.
- Select device to display.
- Unlimited history of the trajectory.
- Status (On / Off)
- Battery level
- Connectivity status (last message received)
- Accelerometer status (movement detector)
- GPS status (last GPS fix).
- Additional info (e.g Altitude/ Speed/temperature, etc.) provided by the device.

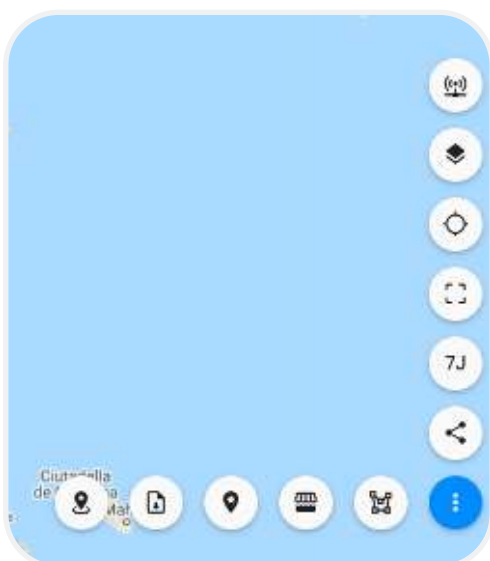

## Track / trajectory

- Display trace with unlimited history.
- Click on each trackpoint to retrieve info (coordinates / speed / Altitude / time & date).
- Arrows show directions of the track.

## Track options

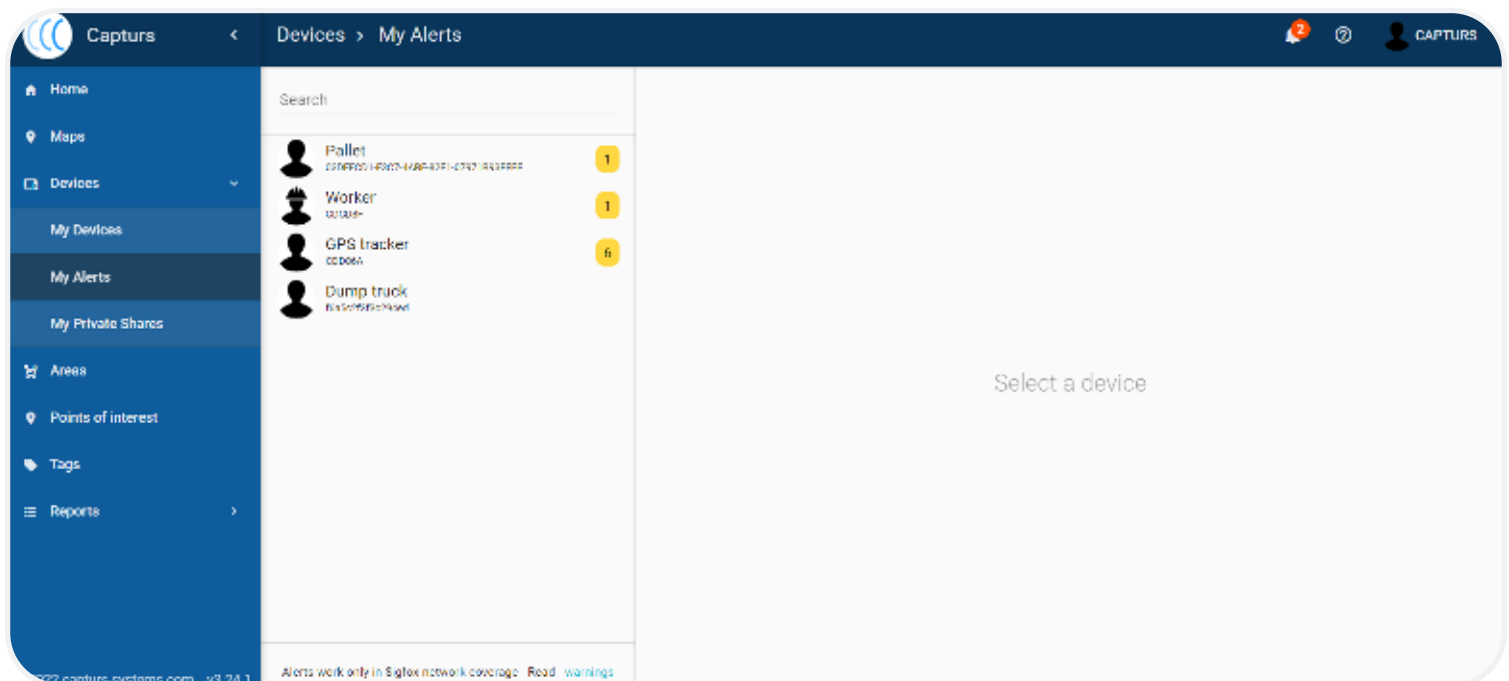

- Choose history time boundaries very easily.
- Retrieve and export physical address stop and time (see below).
- GPX export of all traces : GPX is the universal format to encode GPS tracks, allowing to import the trace in any third party processor.

# Alerts

- Alerts

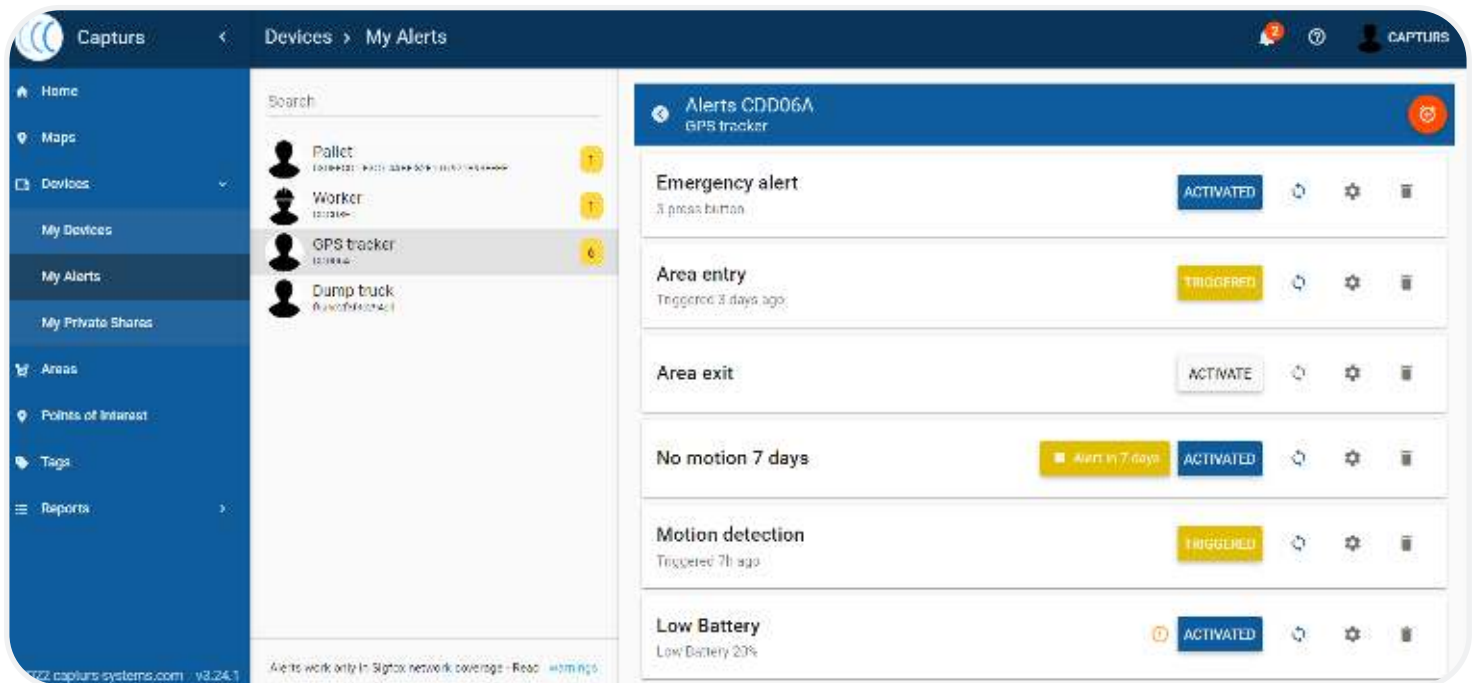

A powerful alert management system allows creating and managing a large quantity of email / SMS alerts for all your devices. The alert system is an essential component to many use cases (access control, theft protection, safety ...). Combining alerts and with external application (IFTTT, Zapier... ) will give infinite possibilities to your IoT system. A specific alerts reports section is available, allowing Excel export.

- Alerts manager allows you to manage all your devices alerts in one screen.

# Alerts types

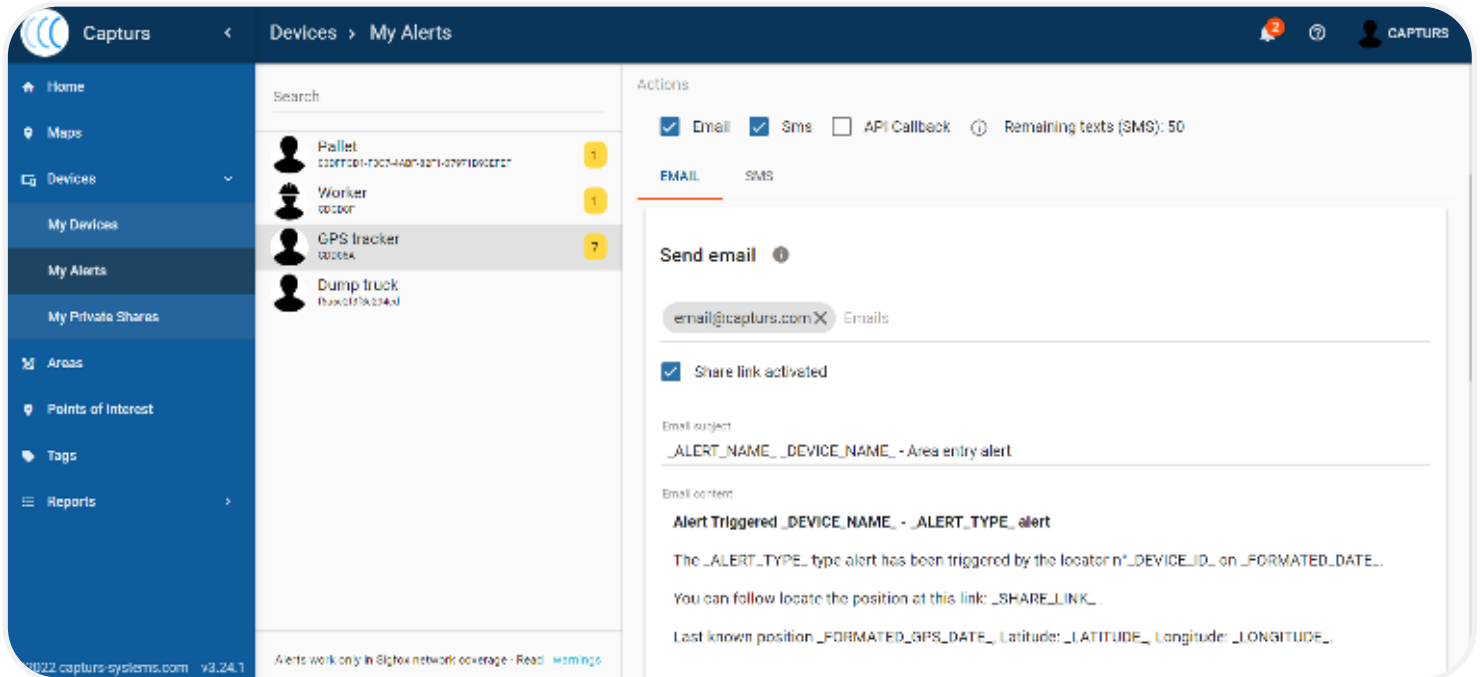

- Program different types of alerts depending on the GPS tracker model: area entry, area exit, motion detection, no motion, absence, powering Off, button presses (1, 2, 3, 4 or long) and low battery.
- Acknowledgement (downlink).
- Additional custom alerts on request.
- Program bulk alerts.
- Combine and manage as needed in one view.
- Activate / deactivate alert in one click.

## Customized alerts

- Setup easily SMS / email alerts (SMS credits in option).
- Unlimited email recipients.
- Fully customize text / objects of SMS / e-mail. Insert tags in your messages (device ID coordinates, date...).
- Share geolocation with a private and secure URL in each alert.
- Charge SMS credits directly from the platform.

- Possibility to filter alerts on specific days and/or times of the week.

☐ Sun. ☒ Mon. ☒ Tue. ☒ Wed. ☒ Thu. ☒ Fri. ☐ Sat.

# Geofencing

- Create In and Out of a zone SMS / email alerts very easily.
- Share locations in a private and secured unique URL in the alert.
- Create simple circular zones as well as complex polygonal fences with unlimited edges.
- Possibility to choose zones registered in the zone library.

# Share your positions

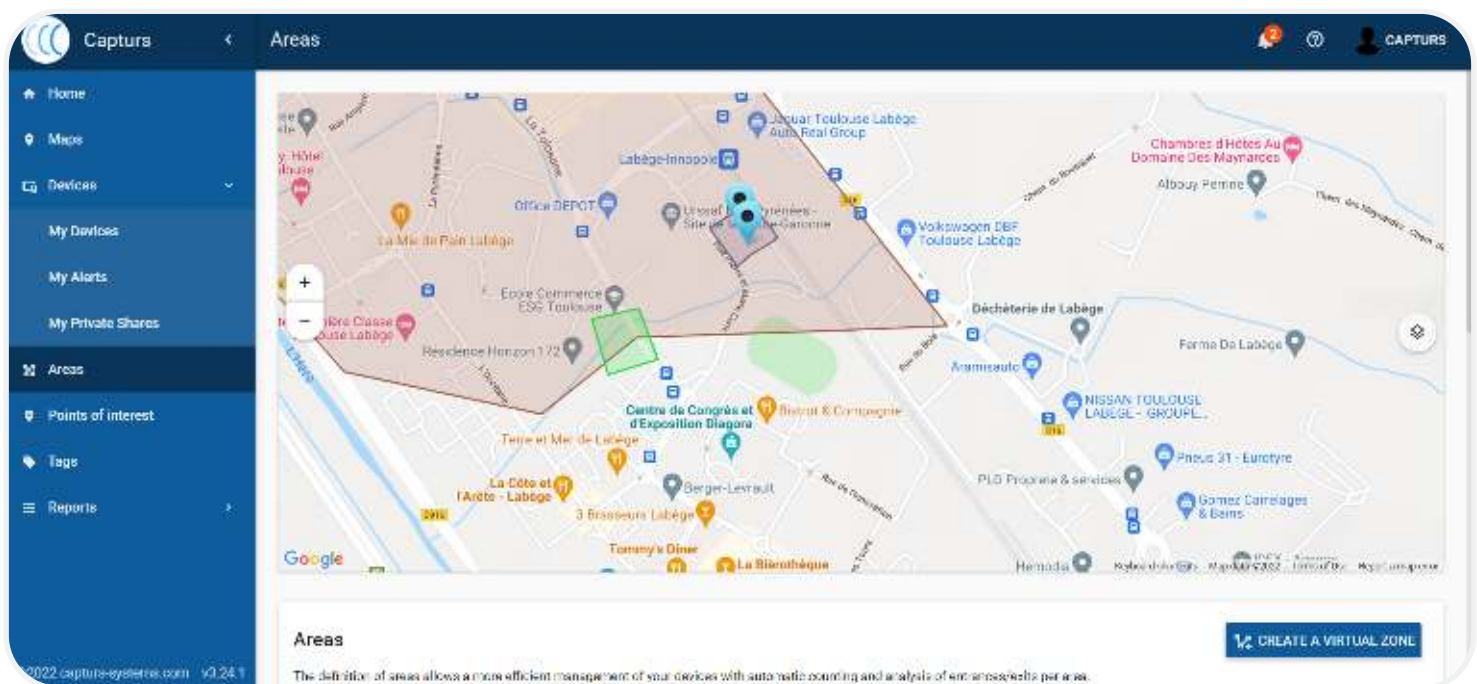

- Share your positions

- Manage customized sharing
- Create unique and secured URL to share your positions and trace.
- Activate, deactivate your shares as needed.
- Automated shares are created with each alert.
- Customize devices you want to share.
- Select shown history duration.
- Associate a GPX trace that will be displayed on the map.

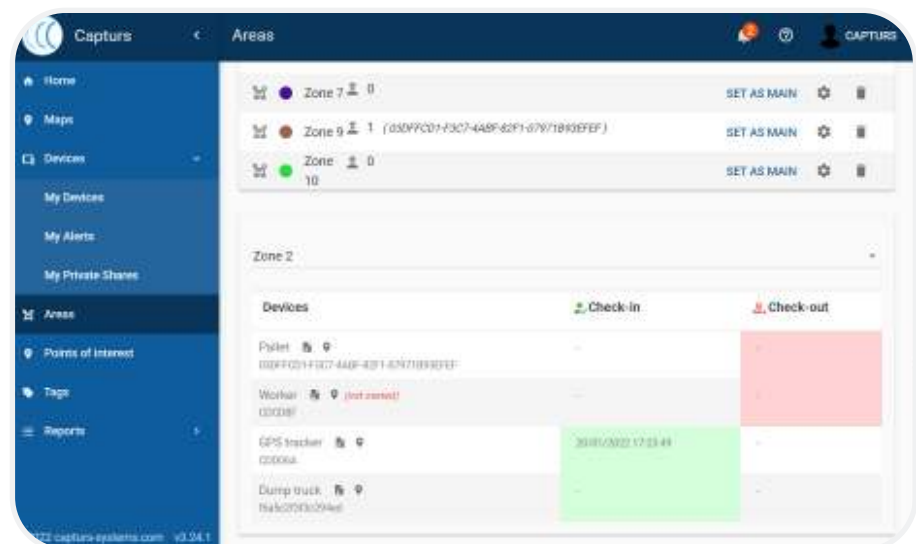

# Areas (Check-in/out)

- Areas (Check-in and check-out)

## Check-in and check-out

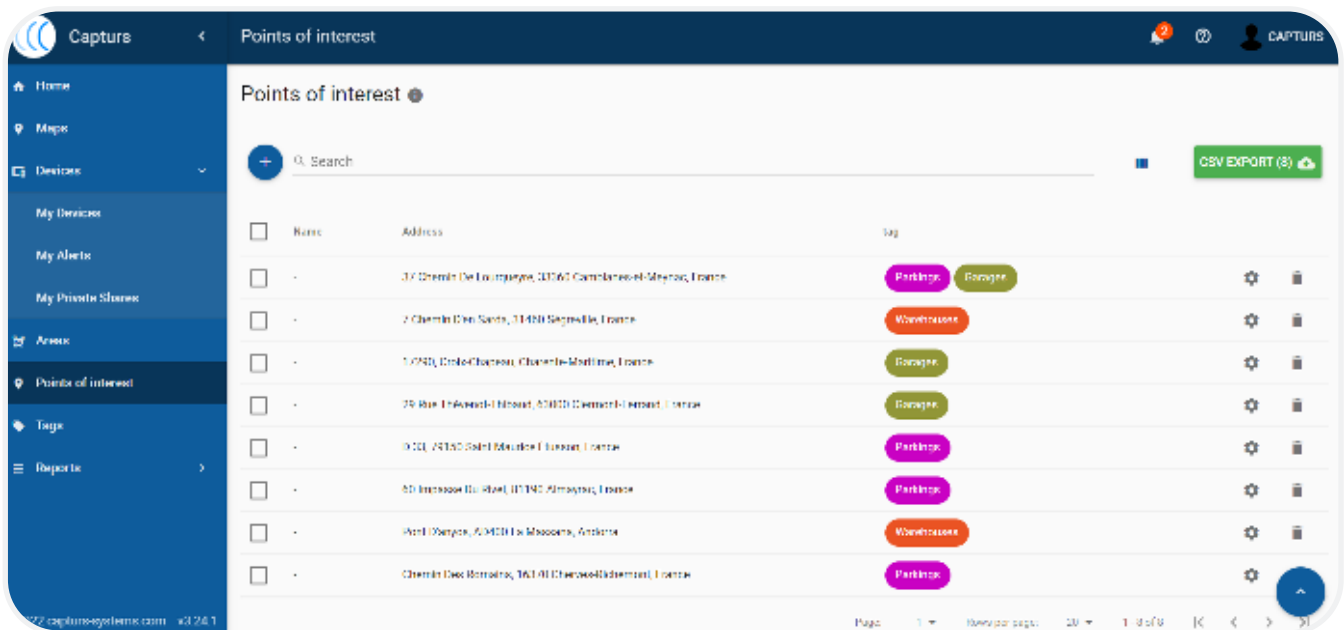

- The system automatically detects and counts devices entering or leaving the zone.
- Automated entry and exit tables for each zone.
- Reports are automated by GPS tracker and by zone, exportable to Excel.
- Real-time status of devices in each zone.

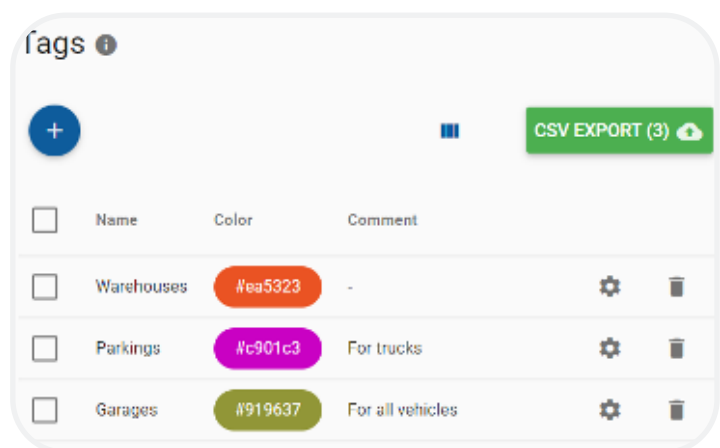

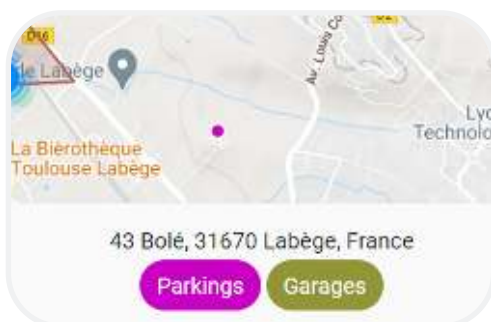

# Points of interest and tags

- Points of interest and tags

- Points of interest are your own landmarks.
- Create them easily with a postal address or by pointing on the map.
- Customize your points of interest with the tag tool: give them colors, descriptions, categories.

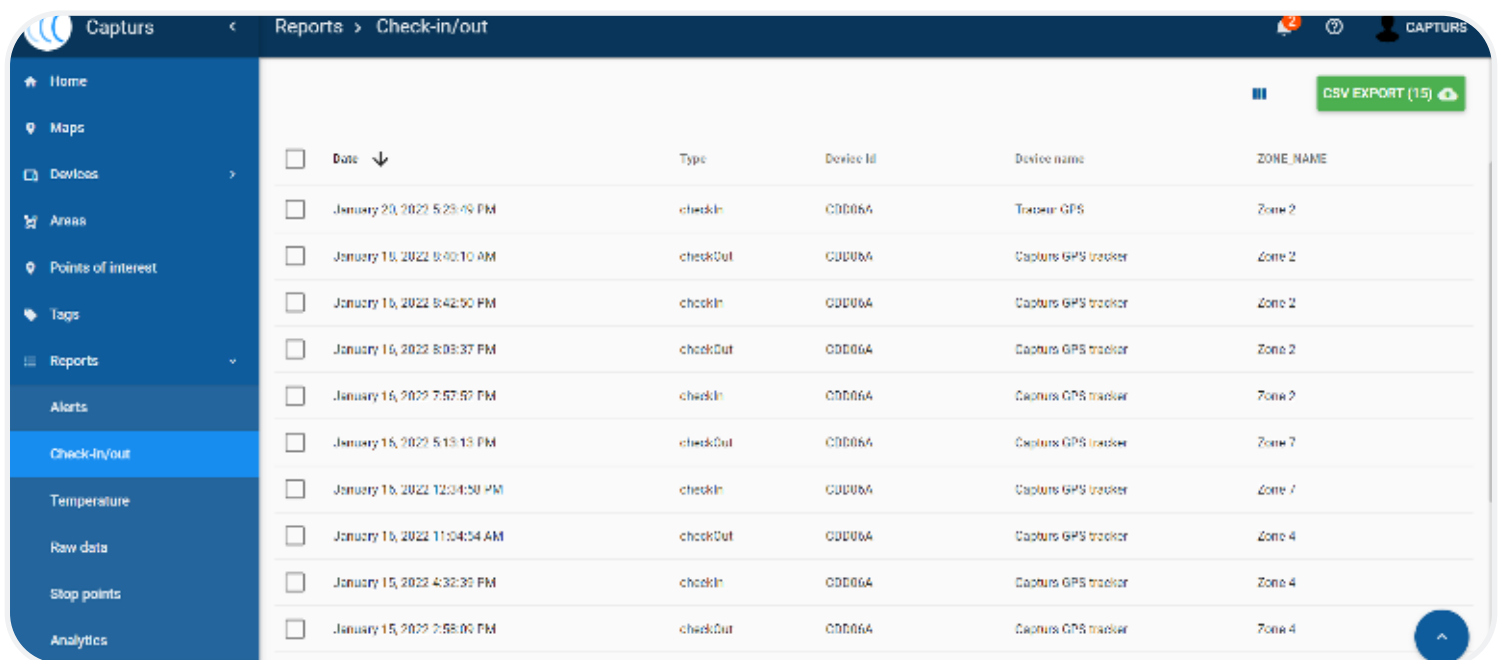

- Find your points of interest and their information on the map.

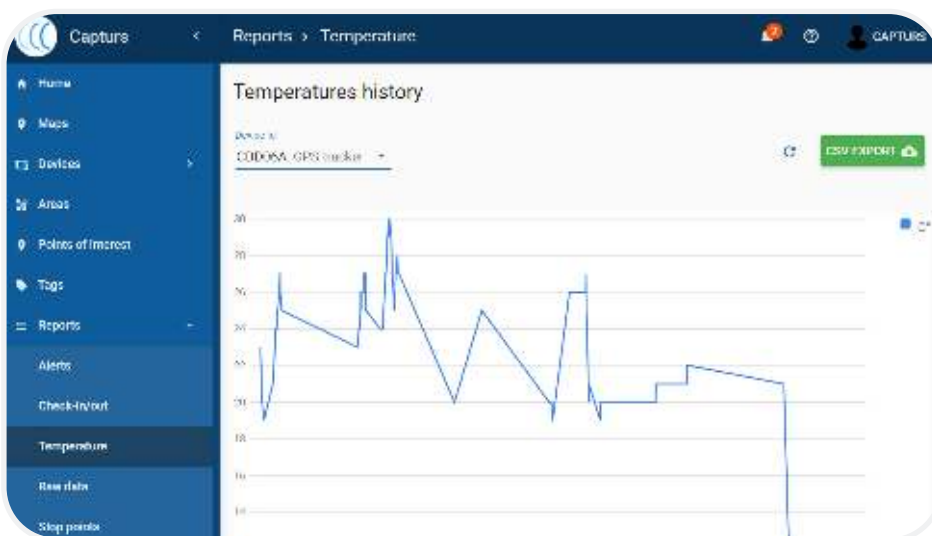

# Reports standards and custom

- Reports standards and custom
